- EXPERIENCE RUNNING APF ON VMs
- TEAM PLAYER W/ PROVEN RECORD OF APF PROJECT SUCCESSES
- EXCELLENT RELATIONSHIPS WITH APPLIED MATERIALS STAFF

CONTRACTOR PROFILE

Project Manager
APF RTD/AMA Consultant
Windows/RHEL/Solaris Systems Analyst

Traek Malan has been working with the APF product suite for over 13 years, most of that time as an employee for the owner of the product, currently Applied Materials.

Beginning at APF Support as a phone and field support engineer, bringing critical Microsoft skills to the newly supported Windows platform, Traek worked to install, train and mentor new users of APF Reporting, RTD and Activity Manager while coordinating specialized deployments and custom solutions for customers around the world. He also served as APF Support's primary Windows resource due to his previous experience at Microsoft.

Traek left Brooks Software (formerly Brooks Automation) during the transition to Applied Materials and returned later that year to staff a much-needed APF resource in the North American Services Group where he provided custom RTD, Reporter and Activity Manager solutions across North America, Europe, the Middle East and Asia. His duties for both positions yielded close professional and personal relationships to many key players at Applied Materials involved in the management, support and development of the APF product family that continue today.

After relocating, Traek left Applied and began working for a previous customer in the semiconductor industry, brought on to revamp and modernize their APF solutions to the Windows platform and current APF feature set, including a complete rewrite and macro-ization of all RTD rules, introducing new automation features using existing software licenses.

Once the project completed, Traek returned to fill a position at Applied where he served as a contract employee for another semiconductor company, helping to resolve several outstanding support issues and work as a liaison for continued process and product improvement between Applied and their customer. Most work was performed on-site and included APF product support, RTD rule writing/training and extensive Activity Manager for Automation training and consulting.

Traek's 15 years of project management experience, veterancy of several industrial engineering groups and their collaboration tools, APF product family key-player relationships and expert APF experience will serve your company well as vital assets. Traek will be able to come up-to-speed quickly and provide immediate value to your existing project or help you plan for your next level of APF integration and automation in your fab.
